Multidisciplinary Management of Atypical Parkinsonism
Including Progressive Supranuclear Palsy (PSP), Multi-system Atrophy (MSA), Cortico-basal Degeneration (CBD) and Lewy Body Dementia (LBD).

OBJECTIVES

- Recognise the signs and symptoms of Multiple System Atrophy (MSA), Progressive Supranuclear Palsy (PSP), Corticobasal Degeneration (CBD) and Lewy Body Dementia (LBD)

- Gain and improve knowledge and skills in the therapy management of these conditions

- Understand the impact these conditions can have on individuals and their families

- Understand the importance and implications of Palliative and end of life care for these conditions
